Projects

Restaurant Bill Generator

HTML, CSS, JavaScript, LocalStorage

- Built a responsive restaurant billing application with table-wise orders, category filtering, and portion selection using a single card per dish to minimize duplication.
- Designed a print-ready receipt template with monospace layout and appended portion labels within item names for compact lines.

Student Performance Predictor

Python, Flask, scikit-learn, HTML, CSS, NumPy, pandas

 <https://github.com/Tech-Surya/student-performance-predictor>

- Developed a machine learning web application to predict student academic performance using key indicators such as study hours, attendance, previous scores, internet access, etc.
- Implemented a Random Forest Classifier trained on synthetically generated data
- Built a Flask-based web interface with HTML/CSS forms to accept student details and display instant predictions on a results page.
